

EDUCATION

Purdue University

West Lafayette, IN

B.S. in Computer Science

GPA: 3.96/4.0 | Relevant Coursework: Multivariable Calculus, Linear Algebra, Discrete Mathematics, Statistics, CS Tools (Linux/Git/CLI)

SKILLS

Languages: C++, Python, Java, TypeScript

Frameworks & Tools: Data Structures & Algorithms, System Design, NumPy, Pandas, RESTful APIs, Git, React, Flask

Databases & Infrastructure: PostgreSQL, Docker, FastAPI, Next.js, React Native, Expo

Achievements: USACO Platinum Division (Top 100 of 5,000+ U.S. Competitors)

TECHNICAL EXPERIENCE

Five Below — IT/AI Intern *June 2026 – Aug 2026*

- Designed and deployed company-wide prompt library with 4 tool-specific playbooks (Glean, Copilot, Cursor, Claude) to standardize AI adoption practices, deployed on FiveTogether for enterprise-wide access to ~3,000 employees.
- Researched and adopted ideas from other corporations for Five Below's AI CoE. Built AI governance infrastructure for Five Below's AI Center of Excellence, accessible company-wide for evaluations.

MascotGO — Software Engineering Intern (Student in Residence) *Dec 2025 – June 2026*

- Engineered comprehensive sports identity database covering 1,000+ schools with 13 custom fields each; achieved ~99% matching accuracy for college-to-team-mascot resolution, enabling core MascotGO recommendations in production.
- Implemented fuzzy matching and SQL-based data validation pipelines for all 1,000+ school records, ensuring production-grade data quality for college matching and recommendation systems.

Purdue Stack — Full Stack Developer *Sept 2025 – Dec 2025*

- Built research platform for seismic data analysis using Electron, React, and Flask, serving 10+ Purdue geology researchers processing 4M+ seismic events for high-fidelity waveform analysis.
- Integrated Plotly and D3.js for interactive visualization; supports import of 4 file formats (CSV, miniSEED, HDF5, XML) and enables export of analysis plots for peer-reviewed publication.

Boiler Quant — Quantitative Analyst *Sept 2025 – Present*

- Engineered a liquidity rewards system, an orderbook system, and a user deposit infrastructure through integration with Stripe SDKs for a social stock exchange, designing market mechanics and incentivization systems for Market Makers.

RESEARCH & PROJECTS

ML@Purdue — Machine Learning Researcher (VGC-RL Team) *Sept 2025 – Present*

- Architected a Deep RL agent for competitive Pokémon VGC (Gen 9) using a spatio-temporal transformer with embeddings, PPO, and fictitious self-play, achieving a 98.2% win rate vs. random and 76.2% vs. heuristic baseline opponents, a 9–38 point improvement over the prior semester.
- Optimized agent performance by creating a high-throughput policy model and behavior cloning implementation, improving state information retention, training speed, and convergence.

LiftScope — Mobile Machine Learning App *April 2026*

- Engineered a cross-platform mobile application using React Native and Expo to provide real-time, on-device gym equipment identification.
- Trained and optimized a custom computer vision classification model using PyTorch and fastai to accurately identify complex gym machinery from user photos.
